Question 1

Correct

Mark 1 out of 1

Flag question

Included as part of Visual Studio are a number of preconfigured dialog boxes Find and Replace, Spell Checker and File Save.

Select one:

- True
- False ✓

Question 2

Correct

Mark 1 out of 1

Flag question

The ListBox control object can hold data of string type only

Select one:

- True
- False ✓

Question 3

Correct

Mark 1 out of 1

Flag question

The default setting for the ComboBox object's DropDownStyle property, is DropDown. Returning this setting prohibits new text from being entered into the ComboBox.

Select one:

- True ✓
- False

Question 4

Correct

Mark 1 out of 1

Flag question

To set the background color for the ListBox control, use the Back property.

Select one:

- True
- False ✓

Question 5

Correct

Mark 1 out of 1

To add functionality to the ListBox control object, you register the DoubleClick( ) event handler method.

Match each control with its proper function

A container in which components can be placed	Label ✗
An area in which the user inputs data from the keyboard. The area also can display information	TextBox ✓
An area that triggers an event when clicked	Button ✓
An area in which icons or uneditable text can be displayed	PictureBox ✗

The correct answer is: A container in which components can be placed → Form, An area in which the user inputs data from the keyboard. The area also can display information → TextBox, An area that triggers an event when clicked → Button, An area in which icons or uneditable text can be displayed → Label

Question 5

Incorrect

Mark 0 out of 1

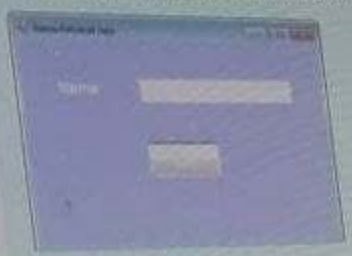
Flag question

Assume Control objects: lblName, txtName, and btnOK.

Assume a user enters his first name in the textbox and hits OK button.

"Name: " followed by the user name will be displayed in the textbox after OK button is clicked.

For example: if the user name is Ahmad, then "Name: Ahmad" will be shown in the textbox.



The code is:

Select one:

- btnOK.Text = "Name: Ahmad";
- txtName.Text = lblName.Text+" "+txtName.Text;
- lblName.Text = "Name: Ahamd";
- txtName.text = "Name: Ahmad" ✘

The correct answer is: txtName.Text = lblName.Text+": "+txtName.Text;
